Lê Văn Hoan

Senior Full-Stack Software Engineer / Technical Lead

0335005854 hoanlv.it.qb@gmail.com https://hoanle1996.github.io/Portfolio/ An Hội Đông District, Hồ Chí Minh City

OBJECTIVE

Full-stack Developer with around 7 years of experience in web application development and 2 years of experience as a Team Leader. Proficient in backend technologies including Java, PHP, Node.js, and NestJS, with knowledge of Ruby and Golang. Experienced in frontend development using React.js, Next.js, Vue.js, JavaScript, and TypeScript, as well as database management with MySQL, PostgreSQL, and MSSQL.
Experienced in microservice architecture, CI/CD practices, and deploying applications using Docker and cloud infrastructure. Actively leverage AI-powered development tools to accelerate development, improve code quality, and optimize engineering workflows. Skilled in leading development teams, coordinating project delivery, and collaborating with stakeholders to deliver reliable software solutions.

KEY ACHIEVEMENTS

• 6+ years of full-stack software development experience across enterprise applications.
• 2+ years leading Agile development teams, coordinating technical delivery and cross-functional collaboration.
• Designed and delivered enterprise-grade ERP, Education, and E-commerce systems serving business users and enterprise clients.
• Hands-on experience in designing and implementing microservices architectures, including service boundaries, API integration, asynchronous messaging, and distributed communication with RabbitMQ.
• Strong technical background in Java, Node.js, React, PostgreSQL, AWS, Docker, and CI/CD automation.

SKILLS

Leadership & Management	Technical Leadership, Agile/Scrum, Sprint Planning, Mentoring, Stakeholder Communication
Backend Development	Java (Spring Boot, Hibernate, MyBatis), Node.js (NestJS, ExpressJS), PHP (Laravel)
Frontend Development	React / Next, Vue / Nuxt, TypeScript, JavaScript
Databases	PostgreSQL, MySQL, SQL Server, MongoDB
Cloud & DevOps	AWS, Docker, GitLab CI/CD, GitHub Actions, Firebase
AI Productivity Tools	Claude, Cursor, GitHub Copilot, ChatGPT

WORK EXPERIENCE

SPLUS SOFTWARE Jan 2026 - Current

Well-System

Position: Technical Team Lead
Team Size: 10
Domain: Multi-tenant Email Management & Ticketing Platform
Tech Stack: Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, WebSocket · Next.js, React, TypeScript, TanStack Query, Zustand, Tailwind · AWS (ECS, RDS, ElastiCache, SQS, SES, S3), Terraform, Docker, GitLab CI/CD
Responsibilities & Achievements:

- Led the team in building a multi-tenant email ticketing platform: ticket management, IMAP/SMTP mail sync with OAuth, auto-rules, approval workflows, SMS, dashboards, audit logs, MFA and IP restriction.
- Managed sprint planning, backlog prioritization, task allocation and code review. Worked with the Japanese client on requirements and pre-UAT quality reviews.
- Designed the backend on Clean Architecture (API → Application → Domain → Infrastructure) with clear module boundaries and centralized error handling.

- Moved heavy work out of the request path into background workers: queue-based email/SMS dispatch, mail sync and scheduled jobs. Added real-time notifications with Redis and WebSocket.
- Set the frontend architecture: App Router, BFF proxy layer, TanStack Query for server state, Zustand for client state, i18n and reusable UI components built on Radix.
- Wrote unit tests (pytest, Vitest) and E2E tests (Playwright), and set unit test rules so every feature and bug fix ships with test coverage.
- Brought AI-assisted development into the team (Claude Code, MCP). Wrote coding rules and review checklists, and set up an AI-assisted merge request review workflow connected to GitLab, Redmine and Slack.
- Built GitLab CI/CD pipelines for lint, type checking, tests and auto-deploy to dev/staging. Used multi-stage Docker builds and dependency/build caching to shorten pipeline time.
- Designed the AWS infrastructure as code with Terraform for the development, staging and production environments.

SPLUS SOFTWARE Aug 2025 - Dec 2025

N-System

Position: Project Manager
Team Size: 3
Domain: Real Estate Management System (migrated from a legacy system to Forguncy, a low-code platform)
Tech Stack: Forguncy, OWASP ZAP, Chrome DevTools
Responsibilities & Achievements:

- Managed a 3-member QA team that tested a real estate system migrated from a legacy platform to Forguncy.
- Defined the test strategy, scope and schedule, allocated tasks, and reported test progress and quality risks to stakeholders.
- Led unit and integration testing to make sure business logic and data flows in the new system matched the legacy system.
- Ran security testing with OWASP ZAP to find common web vulnerabilities (OWASP Top 10), and tracked each finding until it was fixed and re-tested.
- Measured performance with Chrome DevTools (page load, network requests, rendering), found bottlenecks and proposed improvements.

SPLUS SOFTWARE Aug 2023 - Jul 2025

S-CORE PROJECT

Position: Technical Team Lead
Team Size: 6
Domain: Enterprise Resource Planning (ERP) System for Trading Industry
Tech Stack: NestJS, React, PostgreSQL, Docker, GitLab CI/CD
Responsibilities & Achievements:

- Led a team of 6 developers delivering ERP modules used by over 500 internal users.
- Managed sprint planning, backlog prioritization and task allocation for a cross-functional team, and kept sprint delivery on target.
- Led the design of a microservices-based architecture, defining service boundaries so the system stayed scalable and maintainable.
- Introduced AI-assisted development tools (Claude, ChatGPT) for code refactoring, rapid prototyping and documentation.
- Optimized GitLab CI/CD pipelines to automate Docker image builds, testing and deployment, and used dependency caching to shorten pipeline time.
- Reviewed code and set coding standards to keep code quality consistent across the team.

SPLUS SOFTWARE Mar 2023 - Jul 2023

Garment Industry Management System

Position: Technical Team Leader
Team Size: 2
Domain: Garment Industry Management System
Tech Stack: Java, Spring Boot, PostgreSQL
Responsibilities & Achievements:

- Led a 2-member team: allocated tasks, tracked progress and reviewed code.
- Wrote the detailed design and technical documents for each assigned module.
- Built the core business modules: MD Plan Creation, Sales Plan Setting, Order Sheet List, Calculation Sheet, Payment List and Delivery Update (with delivered-quantity display).
- Wrote unit tests for the business logic and cost calculations to make sure results were accurate and to catch regressions early.

SPLUS SOFTWARE Jan 2022 - Feb 2023

LSES

Position: Developer
Team Size: 20
Domain: University Management System
Tech Stack: PHP, Laravel, React, PostgreSQL
Responsibilities & Achievements:

- Developed complex business features with Laravel, React and MySQL across the system's three main modules:
  - **Syllabus:** course setup, including assigning teachers to subjects and defining assessment criteria and grading weights.
  - **LSES (Learning & Student Evaluation System):** evaluation flows for undergraduate, master's and PhD students, plus teacher evaluations.
  - **Portfolio:** statistics and reports on courses, students and learning outcomes.
- Built back-end APIs and business logic with Laravel, and built front-end screens and forms with React.
- Implemented batch processing to handle large volumes of student data efficiently during peak enrollment periods.
- Optimized SQL queries for evaluation and statistics features that read large datasets.
- Wrote unit tests and fixed bugs to keep the features stable.

SPLUS SOFTWARE Jan 2021 - Dec 2021

Catalog Project

Position: Developer
Team Size: *20*
Domain: B2B Product Sales Platform
Tech Stack: Java 8, Spring Boot, VueJS, OutSystems (legacy)
Responsibilities & Achievements:

- Migrated a B2B product catalog and sales platform from the OutSystems low-code platform to Java 8 (Spring Boot) and VueJS.
- Analyzed the existing OutSystems application to understand its business logic, data flows and screens, then rebuilt them in the new system.
- Rebuilt the back-end APIs and business logic with Spring Boot, and restructured the code to be cleaner and easier to maintain.
- Rebuilt the front-end screens with VueJS, keeping the same features and user experience as the legacy system.
- Wrote unit tests and compared results with the legacy system to make sure the migrated features behaved the same way.

SPLUS SOFTWARE Sep 2020 - Dec 2020

Mynavi Doctor

Position: Developer
Team Size: 4
Domain: Career & Job Portal for Doctors
Tech Stack: Ruby on Rails
Responsibilities & Achievements:

- Developed the My Page features of the Mynavi Doctor site, where registered doctors manage their account and job search activity.
- Built server-side logic and pages for My Page with Ruby on Rails.
- Wrote unit tests for the features I built to keep them correct and stable.
- Worked with a 4-member team on reviewing requirements, integrating features and fixing bugs.

SPLUS SOFTWARE May 2020 - Aug 2020

School Management System

Position: Developer
Team Size: 12
Domain: School Management System
Tech Stack: Python, Django, ReactJS, PostgreSQL
Responsibilities & Achievements:

- Developed features for a school management system that handles school operations and data.
- Built back-end APIs and business logic with Python, Django and PostgreSQL.
- Developed front-end screens with ReactJS and connected them to the back-end APIs.
- Wrote unit tests for the features I built to keep them correct and stable.
- Worked with a 10-member team on reviewing requirements, integrating features and fixing bugs.

SPLUS SOFTWARE Nov 2019 - Apr 2020

Lucky Application

Position: Developer
Team Size: 8
Domain: Lottery & Mail-order Platform (Web and Mobile)
Tech Stack: Java 8, ReactJS, React Native, MySQL
Responsibilities & Achievements:

- Built features for a lottery and mail-order platform that customers use on both web and mobile.
- Developed web front-end screens with ReactJS and mobile app features with React Native.
- Built server-side APIs and business logic with Java 8 and MySQL.
- Wrote unit tests for the features I built to keep them correct and stable.

EDUCATION

IUH University Oct 2015 - Oct 2019

Major: Software Engineering

CERTIFICATIONS

AWS SAA-CO3	2025
AWS DVA-CO2	2025

CAREER OBJECTIVE

Seeking a stable position as a Fullstack Developer where I can apply my 6 years of experience in backend and frontend development, contribute to building scalable systems, and continue improving my technical and leadership skills.
